

IPv6

Daryl Tanner

- Current status
 - Sufficient IPv4 addresses for the foreseeable future
 - No plans to introduce CG-NAT
 - An increasing demand from business customers

- SuperHub
 - Approx. 4.2 Million devices
 - Supplied and managed by Virgin Media
 - Both variants are IPv6 capable
 - Tested internally
 - Production firmware has IPv6 disabled

Business CPE

- Already IPv6 capable
- Some exceptions
 - (eg. Older cable modems)

- Majority of network hardware is IPv6-capable
- Necessary upgrades are being carried out
- Legacy devices replaced
- Almost complete

The future

- New products / services coming soon
- 2015 – requirement to utilise IPv6

- IPv6 has already been deployed
 - Germany – with DS-Lite
- Being rolled out shortly in other countries
 - Based on IPv4 address depletion

Thank You!
